

SYNOPSIS

SYNOPSIS

This project is aimed at developing a software useful for student below 5th grade.

TODDLER is a VB.Net application that can be accessed throughout the students.

This software is useful to learn information quickly about natural items like fruits, vegetables, animals and birds. The software is mainly developed for children usage and developed in a manner that is easily manageable, time saving and relieving one from manual works. Nowadays children have lots of interest in computers, so this is a good way to study.

Here we have only **two Modules** and some of **Sub - Module** in the software,

- ❖ Learn
 - ✓ Fruits
 - ✓ Vegetables
 - ✓ Animals
 - ✓ Birds
- ❖ Manipulation (Edit)
 - ✓ Login
 - Category Selection
 - Add new
 - Save
 - Update
 - Delete

INTRODUCTION

CHAPTER - 1

INTRODUCTION

The "**TODDLER**" has been developed to override the problems prevailing in the practicing manual system. This software is supported to eliminate and in some cases reduce the hardships faced by this existing system. Moreover this system is designed for the particular need of the children under 5th Grade.

The application is reduced as much as possible to avoid man power and cost of the products. No formal knowledge is needed for the user to use this system. Thus by this all it proves it is user-friendly.

TODDLER, as described above, can lead to error free, secure, reliable and fast management system. It can assist the user to concentrate on the record of the chart or notebook.

Thus it will help teachers and parent in better utilization of resources. Every organization, whether big or small, has challenges to overcome and managing the Records.

This is designed to assist in strategic planning, and will help you ensure that your organization is equipped with the right level of information and details.

Also, for those busy executive who are always on the go, our systems come with remote access features, which will allow you to manage your workforce anytime, at all times. These systems will ultimately allow you to better manage resources.

1.1 ORGANIZATION PROFILE

I develop this software for all schools, parent, students usage.

So all of the organization like schools are matching here.

The primary aim of the institution is to provide quality of education, with focus on the learners from the downtrodden sections of society and the majority students belong to first generation learners. My software is very useful for the teachers and the parents to make reduce the manpower and the properties of the study records. Existing method of this process is done by manually using the Property with items and their information. So the use of the software is very important for the teaching method improvement.

1.2 SYSTEM SPECIFICATION

1.2.1 HARDWARE CONFIGURATION

- Processor :: AMD PRO A4-4350B
- Ram :: 4 GB
- Hard Disk :: 500 GB
- Monitor :: 14 inches LCD
- Mouse :: Zook gaming BLADE mouse

1.2.2 SOFTWARE SPECIFICATION

- Operating System :: Windows 11
- Language :: VB.Net
- Name of the software :: Visual Studio 2022
- Database :: Ms Access

SYSTEM STUDY

CHAPTER - 2

SYSTEM STUDY

2.1 EXISTING SYSTEM

Process of existing is done by manually. All the needed information of a items are fetched by the teachers or parents.

The students want to learn the particular subject, they should wait for long time because work done manually.

This type of teaching is not only teach by the teacher also teach by the parent using the chart or board.

In the existing system of the process teachers and parents have a chart or board with picture to teach. Or else student have saw the picture, they teach by using that.

I as mentioned previously, today there exist some computer program which helps user to find and learn basic information such as fruits, vegetable, animal and birds

Rest all the computational work either needs a different program or is done manually by faculties of that institution.

- Lack of security of data.
- More man power.
- Time consuming.
- Consumes large volume of pare work.
- Needs manual collection of data records.
- No direct role for the higher officials.

2.1.1 DRAWBACKS OF EXISTING SYSTEM

The main drawback of the system is data loss. The hard copy document or booklet of the note book is misplaced or any type of damage can occur, we will loss the data.

By this process student have boring on their study because of the usual process of study

It has a lot of the time waste and also has man power waste. We have to save the documents for the particular category.

Teachers spend days on each student to teach the varieties of the data.

This is an extremely time-consuming process that is also prone to human errors.

This system is very time taking process and the data can't be accessed accurately.

If there any uneducated parents child or not go through them in their home.

2.2 PROPOSED SYSTEM

The proposed system for “**TOODLER**” replacing the manual work of the teachers and parents.

This application is portable and can easily access by the staffs. Time taken for getting the information will be reduces.

The drawback which are faced in the existing system is overcame by using the proposed system.

The system which is proposed now computerized all the details that are maintained manually.

By this proposed system the teaching is completely diffrenent from the ordinary process.

The student have some excitement while this type of learn.

Proposed approach and its advantage over existing system:

- User friendly
- ALL time availability
- Easy Storage of data.
- More efficient.
- Requires less effort and time.
- Security of data.
- Minimize manual data entry.
- Minimum time needed for the various processing.
- Greater efficiency.
- Better service.
- User friendliness and interactive.
- Minimum time required.
- Student have better viewpoint
- Children have better

2.2.1 FEATURES OF PROPOSED SYSTEM

In this software just give the input of the item information and save their data then it save for a long time. And also the give the inputs for the details, then it automatically stored on the database.

Using learn button on the dashboard user should go to the learn page.

Using edit button on the dashboard user should go to the edit page after the perfect login page.

If there is any error, the message box is notify that. So we will change that very easily.

- Product and Component based
- Creating & Changing Issues at ease
- Query Issue List to any depth
- Reporting & Charting in more comprehensive way
- User Accounts to control the access and maintain security
- Simple Status & Resolutions
- Multi-level Priorities & Severities.
- Targets & Milestones for guiding the programmers
- Attachments & Additional Comments for more information
- Robust database back-end
- Various level of reports available with a lot of filter criteria's
- It contain better storage capacity.
- Easy & fast retrieval of information.
- Decrease the load of the person involve in existing manual system.
- Access of any information individually.
- Work becomes very speedy.
- Easy to update information

SYSTEM DESIGN AND DEVELOPMENT

CHAPTER - 3

SYSTEM DESIGN AND DEVELOPMENT

3.1 DASHBOARD DESIGN

DASHBOARD PAGE

This is the actual screenshot of the login authentication page.

It contain,

- A label is used to display the message
- Two buttons can be used, one is for "Learn" and another one is "Edit".

Work of the button:

Learn - Go to Learn page

Edt - Go to edit page

3.2 INPUT DESIGN

The screenshot shows a software window titled 'Edit' with a light orange background. On the left, there is a 'Select a category' dropdown menu with 'Fruits' selected. Below it is a list box containing 'APPLE', 'ORANGE', and 'BANANA', with 'APPLE' highlighted. On the right, there is a dark green panel titled 'details' containing several input fields: 'Name', 'Varaities', 'Nutrients', 'Place', 'Grow type' (a dropdown menu), 'Color', and 'Photo Path'. A yellow 'BROWSE' button is positioned next to the 'Photo Path' field. At the bottom of the green panel, there are four buttons: 'ADD NEW' (white), 'SAVE' (green), 'UPDATE' (cyan), and 'DELETE' (red). A small white square checkbox is located between the 'SAVE' and 'UPDATE' buttons.

INPUT SCREEN

This is the actual screenshot of the data input screen

It contains,

- Some of label boxes can be used for display some message.
- 5 textboxes can be used for entering the input.
- 2 comboboxes for select the particular list values.
 - Select category - to select the category like fruti, vegetable, animal and fruit
 - Grow type - to select the growtype like tree, plan, vine
- command buttons,
 - Addnew - to clear the textboxes for new input
 - Save - to save the enter value to the database
 - Update - to update what to you want
 - Delete - to delete a record on the database

A checkbox can be used for switch to update option.

UPDATION SCREEN

This is the actual screenshot of update screen.

First check the updation check box to enable update option.

It contain,

This is also as like as the input screen.

For additionally here some of Radio button,

- Radio button near the varieties text box - to update varieties
- Radio button near the nutrients text box - to update nutrients
- Radio button near the place text box - to update place
- Radio button near the grow type combo box - to update grow type
- Radio button near the color text box - to update color
- Radio button near the browse button - to update picture

After check the Radio button enter the data to change and click on the “update” button.

3.3 OUTPUT DESIGN

FRUIT INFORMATION VIEWER SCREEN

This is the actual screenshot of the fruit information viewer
It contains,

- Some of the labels can be used for display message.
- One listbox can be used to select a item from the name of the fruit.
- text box can be used display value.
- A picture box to show the image of the fruit.
- Four command button to select the category link fruit, vegetable, animal and birds

Other screenshots are attested below..(Vegetable, Animal, Birds)

VEGETABLE INFORMATION VIEWER SCREEN

ANIMAL INFORMATION VIEWER SCREEN

BIRDS INFORMATION VIEWER SCREEN

These are the output screens to display the details about the selected category.

3.4 DATABASE DESIGN

TABLE 1: fruit

Field Name	Data Type
name	Short text
varieties	Short text
nutrients	Short text
place	Short text
growtype	Short text
photo	Long text
color	Short text

TABLE 2: vegetable

Field Name	Data Type
name	Short text
varieties	Short text
nutrients	Short text
place	Short text
growtype	Short text
photo	Long text
color	Short text

TABLE 3: animal

Field Name	Data Type
name	Short text
varieties	Short text
sc	Short text
place	Short text
food	Short text
photo	Long text
color	Short text

TABLE 4: bird

Field Name	Data Type
name	Short text
varieties	Short text
Sc	Short text
place	Short text
food	Short text
photo	Long text
color	Short text

3.5 SYSTEM DEVELOPMENT

3.5.1 DESCRIPTION OF MODULES

- DASHBOARD
- LEARN
 - ✓ FRUIT
 - ✓ VEGETABLE
 - ✓ ANIMAL
 - ✓ BIRDS
- MANIPULATION(EDIT)
 - ✓ LOGIN
 - Category Selection
 - Add new
 - Save
 - Update
 - Delete

DASHBOARD

Here this module is used to select the where you would like to go. For example, if you are a student you have to select “learn” to study, else you are a teacher or parent then you have to “edit” to manipulate the data stored on the database

LEARN

This module is used to Display items information. Here also we have the some sub-module to select the category, by this option you have select the category like fruits, vegetable, animal and birds. Here the list of sub-module, here I mention the command button as a sub-module.

Fruit	-	to display the details of fruits
Vegetable	-	to display the details of vegetable
Animal	-	to display the details of animal
Birds	-	to display the details of birds

MANIPULATION (EDIT)

This module is used to add new item, save the particular item, update the particular set of the value and delete the particular item from the database. Here also we have the some sub-module to select the category, by this option you have select the category like fruits, vegetable, animal and birds. Here the list of sub-module,

Login - this login access is used to verify that you are the admin
Category selection - to select the particular category like fruit,
vegetable, animal and fruit.

COMMAND BUTTONS AS SUB-MODLE

addnew - this button is used to add new item at the table
save - this button is used to save item
update - this button is used to update a particular item at the table
delete - this button is used to delete a item from the table

TESTING AND IMPLEMENTATION

CHAPTER - 4

TESTING AND IMPLEMENTATION

TESTING TECHNOLOGIES

System Testing

System testing, or end-to-end testing, tests a completely integrated system to verify that it meets its requirements.

For example, a system test might involve testing a logon interface, then creating and editing an entry, plus sending or printing results, followed by summary processing or deletion (or archiving) of entries, then logoff.

Unit Testing

Unit testing, also known as component testing, refers to tests that verify the functionality of a specific section of code, usually at the function level.

In an object-oriented environment, this is usually at the class level, and the minimal unit tests include the constructors and destructors.

These types of tests are usually written by developers as they work on code (white-box style), to ensure that the specific function is working as expected.

System Testing

System testing is the first level in which the complete application is tested as a whole.

The goal at this level is to evaluate whether the system has complied with all of the outlined requirements and to see that it meets Quality Standards.

System testing is undertaken by independent testers who haven't played a role in developing the program.

User Input Validation Testing

The User input must be validated to confirm to expected values. The fields should also not be empty.

Testcase for the dashboard form

Test case	Test description	Test step	Expected result	Actual result	status
TC-1	Open learn form when click the learn button	Click the learn button	Open the learn form	Learn form opened	Success
TC-2	Don't open edit form when click the learn button	Click the learn button	Don't open the edit form	Learn form opened	success
TC-3	Open edit form when click the edit button	Click the edit button	Open the edit form	Edit form opened	Success
TC-4	Don't open learn form when click the edit button	Click the edit button	Don't open the learn form	Learn form opened	success

Testcase for the learn form

Test case	Test description	Test step	Expected result	Actual result	status
TC-1	List out all of the fruit items in listbox when click the fruit button	Click the fruit button	List out fruits in listbox	Fruit items are displayed in listbox	Success
TC-2	List out all of the vegetable items in listbox when click the vegetable	Click the vegetable button	List out vegetable in listbox	vegetable items are displayed in listbox	Success
TC-3	List out all of the animal items in listbox when click the animal button	Click the animal button	List out animal in listbox	animal items are displayed in listbox	Success
TC-4	List out all of the birds items in listbox when click the bird button	Click the bird button	List out birds in listbox	birds items are displayed in listbox	Success
TC-5	On the right side, show the details of the selected item from the list box	Select a item from the listbox	Show the details of the selected item	Selected item details are visible	Success

Testcase for the login form

Test case	Test description	Test step	Expected result	Actual result	status
TC-1	If the checkbox is checked the password text are visible to the user	Enter data on password textbox and check the checkbox	Password textbox text are visible to the user	Text are visible to the user	Success
TC-2	If the checkbox is unchecked the password text are visible to the user	Enter data on password textbox without check the checkbox	Password textbox text are not visible to the user	Text are not visible to the user	Success
TC-3	Go to the previous page when click the back button without any other operation	Click the back button	Open the previous page	Previous page opened without any other operation	success
TC-4	Go to the next page when click the login button with correct data	Enter correct data and click the login button	Open the next page	Next page opened	success

Testcase for the edit form

Test case	Test description	Test step	Expected result	Actual result	status
TC-1	List out all of the fruit items in listbox when when select fruit in combobox	Select fruit in the combobox	List out fruits in listbox	Fruit items are displayed in listbox	Success
TC-2	List out all of the vegetable items in listbox when select vegetable in combobox	Select vegetable in the combobox	List out vegetable in listbox	vegetable items are displayed in listbox	Success
TC-3	List out all of the animal items in listbox when select animal in combobox	Select animal in the combobox	List out animal in listbox	animal items are displayed in listbox	Success
TC-4	List out all of the birds items in listbox when select bird in combobox	Select bird in the combobox	List out birds in listbox	birds items are displayed in listbox	Success
TC-5	On the right side, show the details of the selected item from the list box	Select a item from the listbox	Show the details of the selected item	Selected item details are visible	Success

TC-6	Open addnew section when click the addnew button	Click the addnew button	Make empty all the input boxes	All input boxes are empty	Success
TC-7	Save input details on the selected database when click the save button	Click the save button	Save data on the database and show a message like saved	Data saved and message showed	Success
TC-8	Update the selected set on the selected database when click the update button	Select set and click the update button	update data on the database and show a message like updated	Data updated and message showed	Success
TC-9	Delete the selected record on database when click the delete button	Select a item and click the delete button	Delete the selected data on the database and show a message like deleted	Record deleted and message showed	Success

4.1 FUTURE IMPLEMENTS

In near future, the system interface could be improved, with more attractive, interactive and meaningful images; Enhance the current system by computerizing almost all the services provided by parents and teachers. Enlarge the items like flowers, insects, etc...

- Creating & Changing Issues at ease
- Query Issue List to any depth
- User Accounts to control the access and maintain security
- Simple Status & Resolutions
- Targets & Milestones for guiding the programmers
- Attachments & Additional Comments for more information
- Various level of reports available with a lot of filter criteria's
- It contain better storage capacity.
- Accuracy in work.
- Easy & fast retrieval of information.
- Well designed reports.

CONCLUSION

CHAPTER - 5

CONCLUSION

TODDLER is a desktop and can be used at any place, any time and by any student or faculty. This application will avoid the manpower and record booklets by students as well as faculty.

Our project is only a humble venture to satisfy the needs to manage their project work. Several user friendly coding have also adopted. This package shall prove to be a powerful package in satisfying all the requirements of the school.

The software planning is to provide a frame work that enables the manger to make reasonable estimates made within a limited time frame at the beginning of the software project and should be updated regularly as the project progresses.

End Class
```

D. SAMPLE INPUT

The image displays two screenshots of a web application interface, likely for managing fruit data. Both screenshots show a window titled "Edit" with a sidebar and a main form area.

Top Screenshot (Initial State):

- Category Selection:** A dropdown menu labeled "Select a category" is set to "Fruits".
- Category List:** A list box on the left contains "APPLE", "ORANGE", and "BANANA".
- Form Fields:** The main form area has several input fields: "Name", "Varaities", "Nutrients", "Place", "Grow type", "Color", and "Photo Path". A "BROWSE" button is next to the "Photo Path" field.
- Buttons:** At the bottom of the form are four buttons: "ADD NEW", "SAVE", "UPDATE", and "DELETE".

Bottom Screenshot (Filled State):

- Category Selection:** The dropdown menu is still set to "Fruits".
- Category List:** The list box contains "APPLE", "ORANGE", and "BANANA", with "BANANA" highlighted.
- Form Fields:** The main form area is filled with data: "Name" is "BANANA", "Varaities" is "1000+", "Nutrients" is "Potassium, Fibar", "Place" is "India", "Grow type" is "plant", "Color" is "Yellow", and "Photo Path" is "E:\Workshop\VS\Toddler\photos\banana.jpg". A "BROWSE" button is next to the "Photo Path" field.
- Buttons:** At the bottom of the form are four buttons: "ADD NEW", "SAVE", "UPDATE", and "DELETE".
